This assignment is not mandatory for Developers.

Use the below application to write test cases and test scenarios. You need to automate the same test cases using Selenium

http://magnus.jalatechnologies.com/

User Name:
training@jalaacademy.com

Password: jobprogram (all are in lowercase)

You need to log 5 defects in JIRA. Once you have found 5 defects on the application, you can contact the Technical Coordinator to create an account in JIRA.

No need to write 100s of automation test scripts, Just focus on covering all the scenarios and get familiar with Selenium API.
A session will be arranged on how to build a Page Object Model framework on your own with all the concepts you learned once you have completed all the assignments. You have learned many things in the last few weeks, You're very close to getting a Job. Stay focused.

Regards,
JALA Placement Team
